

Zaineb ElHeni

Cloud & DevOps Engineer | Azure · OpenStack | Terraform | Kubernetes | CI/CD | DevSecOps

✉ heni.zeineb@gmail.com ☎ +21693840013 📍 tunis 🌐 LinkedIn 🐙 GitHub 📁 Portfolio

Profile

Cloud & DevOps engineer, ESPRIT graduate, specialised in infrastructure automation and the industrialisation of CI/CD delivery chains, with hands-on cloud deployment on Azure and OpenStack and Kubernetes orchestration. Used to turning manual deployments into reproducible, standardised and secured environments, with security built into the pipeline rather than bolted on. Seeking a Cloud Engineer / DevOps Engineer position in Tunisia or remote.

Education

Engineering Degree in Computer Science, ESPRIT 2026

Preparatory Cycle in Physics and Chemistry, IPEIT 09/2021 – 06/2023

Professional Experience

Final-Year Internship, Sofrecom Tunisie (Orange Group) 02/2026 – 08/2026

- Designed and industrialised a reusable library of 11 GitLab CI/CD templates and 13 Terraform modules, standardising Azure deployments.
- Automated the provisioning of complete Azure environments 13 services (network, databases, storage, secrets, monitoring) reproducible and consistent.
- Embedded security controls into the CI/CD pipelines (code, dependencies, secrets, IaC), with blocking thresholds per environment.
- Strengthened Azure database security with identity-based authentication, removing passwords stored in pipelines and configuration files.
- Developed a GitHub Copilot skill generating deployment files from a natural-language description, then validated the whole chain on an internal application.

Engineering Internship, IMEX (Information Management Expert) 07/2025 – 09/2025

- Designed a cloud-native CI/CD platform on Kubernetes, built on GitHub Actions and Argo CD, with continuous deployment following a GitOps approach.
- Strengthened reliability and security by integrating SonarQube, Vault, Keycloak and RabbitMQ to cover code quality, secret management, authentication and messaging respectively.

Summer Internship, IMEX (Information Management Expert) 06/2024 – 08/2024

Development of a web application for API call monitoring using React.js, Next.js, and Flask. Implemented real-time visualization of metrics such as daily call volume, success and failure rates, and the most and least used APIs.

Projects

CI/CD Pipeline & Cloud-Native Orchestration

- Designed and implemented a CI/CD pipeline for a Spring Boot / MySQL application using Jenkins, Docker, and Kubernetes (Minikube) to enable automated builds, testing, and deployments across clustered environments.
- Integrated SonarQube, Prometheus, and Grafana to ensure continuous code quality assessment, real-time monitoring, and performance visualization of deployed services.

Design and deployment of a cloud-native SaaS educational platform.

- Built a multi-node private cloud on OpenStack and automated Docker/Kubernetes provisioning with Ansible. Deployed a Spring Boot / Angular student platform (messaging, courses, complaints, course purchases) with Prometheus/Grafana monitoring and its database hosted on Azure.

Skills

Cloud & Infrastructure as Code

Microsoft Azure, AWS, OpenStack, Terraform, Ansible, Bash, PowerShell

Containers & Orchestration

Docker, Kubernetes, Azure Container Registry, Azure Container Apps

Monitoring & Observability

Prometheus, Grafana, Azure Monitor, Application Insights, Log Analytics

virtualization

VmWare , VirtualBox

CI/CD & Automation

GitLab CI/CD, GitHub Actions, Jenkins, Argo CD, Git

Security & Identity

Checkmarx, Trivy, Gitleaks, tfsec, SonarQube, HashiCorp Vault, Keycloak, Azure Key Vault, Entra ID

Languages & Frameworks

Java / Spring Boot, Python, TypeScript, JavaScript, Angular, React, Next.js, .NET

Databases & Messaging

PostgreSQL, MySQL, Oracle, Azure Service Bus, RabbitMQ

Certificates

Azure AI Fundamentals

Associate

Azure Fundamentals

Associate

AWS Cloud Operations

Trained

Hedera Hashgraph Blockchain Developer Certification

Associate

Languages

Arabic

Native

English
